How to operate

Walk-2-GPS

The mobile phone app that could save your life

- First thing before you walk away from your camp or car is to mark that position in **My Favourite Locations** (You may need to wait a few seconds for the GPS in your phone to come alive or calibrate if it requests. The phone may need clear view to the sky for satellite reception.)

- Swipe **My Favourite locations** up to expose the Add button. (Bottom Left) Then Add your new location. (It will be placed at the right end of your list and will show in the middle of the compass.)
- Touching any icon in My Favourite Locations or around the compass will select it and show distance to that location. Then touch the background and the triangle will appear. Just keep the icon you wish to walk to in the triangle while walking back to it. (Distance to target is shown at the above the triangle when target is in the triangle. When walking back, your icon moves inside the compass circle at about at 50 meters and vibrates when you get to 10 meters of target. Make sure you are walking to the correct wanted location.)

Extra Features:-

- Touch the background short press will show compass degrees.
- Long press on background will switch between light and dark background
- Touch icon top right or location name and it will show the date time the location was set and the actual GPS coordinates. Copy To Clipboard and past to other application as required.

Main Menu:

Extra features are available from the main menu top left. The items not mentioned are self explanatory. (Touch edges to go back to compass.)

- **Show this on Map** requires phone signal for data but will link to maps.
- **Description** add more information about your marked locations.
- **Hide** removes clutter from the compass rose
- **Location from Clipboard** allows the placement into favourites of a position taken from another application. (ie Out-n-About)
- **Where Am I** to show your actual location coordinates. You could read them out to someone or copy to the clipboard to SMS or show on a map. (Map and SMS requires phone signal.)
